MPM1D EQAO / Final Exam Review Day 2 - Exponent Rules and Polynomials

1 The expression below can be simplified.

$$\frac{(x^2y)^3}{(xy)^2}$$

Which of the following shows the expression in its simplest form?

- a  $x^4y$
- b  $x^4$
- c  $xy$
- d  $x^3y$

$$\frac{x^6 y^3}{x^2 y^2} = x^4 y^1$$

Which of the following represents the expression  $2(3x + 4) + 3(x - 1)$  in a simplified form?

- a  $9x + 3$
- b  $9x + 5$
- c  $8x + 8$
- d  $8x + 11$

$$6x+8+3x-3 = 9x+5$$

What Side?

The perimeter of the triangle below is 75 m.

Determine the measure of each side of the triangle.

Show your work.

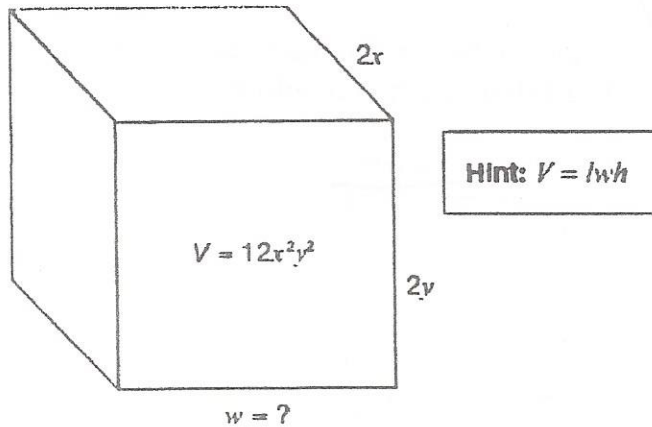

$$75 = (2x+3) + (3x+4) + (2x-9)$$

$$75 = 7x - 2$$

$$77 = 7x$$

$x = 11$

A box with a volume of  $12x^2y^2$  is shown below.

What is the width of the box?

- a  $2xy$
- b  $3xy$
- c  $4x^3y^3$
- d  $8x^3y^3$

$$12x^2y^2 = (2x)(2y)(\quad)$$

Which of the following is equivalent to the expression below?

$$(4x - 5) + (2x + 1)$$

- a  $2x - 6$
- b  $2x - 4$
- c  $6x - 6$
- d  $6x - 4$

$$6x - 4$$

What is the area of the rectangle shown below is  $6xy^2$  square units.

Hint:  $A = lw$

If the width is  $3x$  units, which expression represents the length of the rectangle?

- a  $2xy^2$  units
- b  $2y^2$  units
- c  $3xy^2$  units
- d  $3y^2$  units

$$(3x)(\quad) = (6xy^2)$$

What is the value of  $(x^2)^3$  when  $x = \frac{1}{2}$ ?

- a  $\frac{1}{4}$
- b  $\frac{1}{12}$
- c  $\frac{1}{32}$
- d  $\frac{1}{64}$

$$\left(\frac{1}{2}\right)^6$$

~~14.~~ Josie works in a sports store. She receives 8% of the total sales each day. One day, she receives \$35 for her portion of the total sales. What are the total sales for that day?

- a \$37.80
- b \$43.75
- c \$280.00
- d \$437.50

$$8\% - \$35$$

$$100\% = X$$

$$\frac{X}{100} = \frac{35}{8}$$

$$X = \frac{35}{8} 100$$

$$= 437.50$$

~~15.~~ Alfredo and his wife, Jody, work in a restaurant.

Last week Alfredo received an average of \$15 in tips for each of the 55 tables he served. Jody received an average of \$20 in tips for each of the 60 tables she served.

They are planning a weekend trip. Alfredo will pay a total of \$220 for their hotel room and Jody will pay a total of \$160 for their rental car.

How much of their combined tips will be left over after they have paid for their hotel room and rental car?

- a \$1620
- b \$1645
- c \$2025
- d \$2405

$$15 \times 55 = 825$$

$$20 \times 60 = 1200$$

$$\underline{2025}$$

$$2025 - 380 = 1645$$

~~16.~~ **Keepin' Tabs**

A student council collects aluminum pop tabs to raise money to purchase a wheelchair. A company buys the pop tabs for \$0.88 per kilogram.

If 1267 pop tabs have a mass of one pound, how many pop tabs are needed to purchase a wheelchair worth \$1500?

Show your work.

kg needed:

$$1500 \div 0.88 = 1704.55$$

lb needed:

$$1704.55 \times 2.2 = 3750 \text{ lb}$$

# of pop tabs:

$$3750 \times 1267 = \underline{\underline{4\,751\,250}}$$

Hint:  
1 kilogram = 2.2 pounds

### 19 CD Sell-Off

Juan belongs to a CD club that sells CDs for \$11.44 each before tax. His first shipment of CDs costs \$90.49 including 13% tax.

How many CDs are in his first shipment?

Show your work.

$$\begin{array}{r} 90.49 - 113\% \\ x - 100\% \\ \hline \frac{x}{100} = \frac{90.49}{113} \end{array}$$

$$x = 80.08$$

total Cost before tax:  
\$ 80.08

# of CDs

$$80.08 \div 11.44$$

$$= 6.99$$

$$\approx 7$$

He had 7 CDs in the shipment.

### 20 Competing Sales

Sam is interested in buying a TV. At Fair Deal, the TV is regularly priced at \$599.99 and is on sale for 20% off the regular price. At Big Big Discount, the same TV is regularly priced at \$899.99 and is on sale for 30% off the regular price.

What is the difference in the sale price of the TV between these two stores?

Show your work.

$$\text{\$ } 599.99$$

$$20\% \text{ off} = 80\%$$

$$(\cancel{599.99} \times 0.8) = \text{\$ } 479.99$$

$$\text{\$ } 899.99$$

$$30\% \text{ off} = 70\%$$

$$\text{\$ } 629.99$$

The difference in the sale price is :  $629.99 - 479.99 = \text{\$ } 150$
